

# EYEBROW TATTOOING

## AFTERCARE

COSMETICTEAM.COM.AU

### DAYS 1-7

- + Avoid wetting the treated area for 7 days.
- + At the start and end of each day BEFORE showering, clean brows with a damp cotton tip by gently wiping back and forth. Use dry end of cotton tip to dry.
- + Use a cotton tip to apply a small amount Stratamed to the area. Do not apply the ointment unless the area is dry.
- + Less is more when considering how much ointment to apply; the amount applied to each eyebrow should be comparable in size to half of a grain of rice.
- + Microblading aftercare ointment should only be applied twice per day following the washes to avoid suffocating the skin and interfering with the skin's natural healing process.
- + Avoid getting any Moisturiser/oils/cleansers/AHA's/BHA's on the area.
- + Make sure no foundation gets applied over the area.

# EYEBROW TATTOOING

## It's critical to avoid the following for 14 days after your microblading procedure:

- + Touching the area except when washing or applying aftercare ointment.
- + Scratching, picking or peeling the area, as it can cause scarring and/or colour loss.
- + Applying any makeup, moisturiser, lotion, or sunscreen to your eyebrows.
- + Sun exposure - sun tanning - salon tanning.
- + Laser or chemical peels, and any other form of exfoliation.
- + Exercise - participating in sports and activities that induce perspiration.
- + Long, hot baths or showers - saunas - swimming.
- + Engaging in tasks like heavy household cleaning where airborne debris can become prevalent.
- + Drinking excessive amounts of alcohol, as it can cause wounds to heal slower.

## WHAT TO EXPECT AFTER THE TREATMENT

### DAY 1

- + Eyebrows look amazing immediately after microblading appointment.
- + Pigment gradually gets darker through out the day.

### WEEK 1

- + Pigment reaches darkest level on day two.
- + Light scabbing develops where microblading strokes occurred.

### WEEK 2

- + Scabbing from microblading strokes begin to peel and flake off, sometimes revealing no definite, visible colour in skin.

### WEEKS 3-4

- + Pigment in skin continues to oxidize and microbladed strokes begin to reappear in colour intended from the beginning, but some strokes come back looking patchy.

### WEEK 6

- + Eyebrows fully healed and ready to undergo the finishing effects of touch-up appointment.
